YAIS 2026: Impact Innovation Showcase

Impact projects addressing challenges in education, health, environment, or community. Students showcase initiatives that aim to create meaningful impact through innovation and creativity.

Idea: Cozy Corner

1. Problem

- Procrastination and poor study habits
- Test anxiety and performance pressure
- Emotional overwhelm without safe outlets
- Feeling alone in academic stress

---

2. Innovative Idea

Creating a meaningful digital space that helps students of all kinds:

- Building sustainable study habits
- Practice performing under test pressure
- Regulate emotions daily
- Feel supported without being put down

---

3. Structure

A. Exam Simulation (Education)

Purpose: Reduce test anxiety through gradual exposure.

Features:

- Timed practice test interface
- Simulated classroom/test atmosphere
- Countdown clock
- Light background classroom audio
- Post-session reflection prompt
- Different tests for every grade
- Customized to not discourage the user
- Helps to teach the criteria

Impact:

- Trains emotional control under pressure
- Improves time management
- Reduces panic response

B. Habit Interrupter (Behavior & Productivity Focus)

Purpose: Stop procrastination patterns before they escalate.

Features:

- 5-minute “starter tasks”
- Micro-goal tracking
- Streak visualization for consistency
- Brief explanations of procrastination psychology
- Supportive, understandable, and consistent
- Helps user no matter what

Impact:

- Builds momentum through small wins
- Educates students on habit formation
- Encourages sustainable discipline

C. Vent Vault (Mental Health Focus)

Purpose: Provide safe emotional release without social pressure.

Features:

- Private writing space
- Emotion intensity selector
- Grounding exercises
- Guided reframing prompts

Showcase Feature (Optional) :
Anonymous emotional trend data (example: % of students reporting stress before exams)

Impact:

- Encourages early emotional regulation
- Reduces isolation
- Promotes self-awareness

D. Optional Features

Features:

- Sign in without using your actual email (express yourself)
- Email organizer for improvements
- Added things in categories for money funds (tutoring, funding areas, merch)

---

4. Innovation Factor

Innovative because:

- It combines academic performance + mental health + habit science in one preventative system.
- It focuses on exposure training for test anxiety (rare in student tools).
- It addresses procrastination through psychology, not punishment.
- It shifts student support from reactive to proactive.

---

5. Target Audience

Primary:

- Middle school and high school students

Secondary:

- Schools and educators seeking preventative support systems

Tertiary:

- Adults who need support

---

6. Prototype Plan (For Impact Showcase)

For the showcase, this doesn't need to be a full app.

Prototype could include:

- Interactive demo of one feature (Exam Simulator or Habit Interrupter)
- Mock-up designs (Figma or slide-based)
- Research-backed explanation of need
- Sample emotional trend data visualization

The focus is clarity of system and impact potential.

---

8. Long-Term Vision

If developed further, The Reset Room could:

- Be integrated into school platforms
- Offer personalized stress training
- Use AI for adaptive learning patterns
- Provide anonymized community wellness insights

Prompt for Base44

BASE IDEA

Create a web-based application called "The Reset Room" — a preventative student support system focused on education, habit building, emotional regulation, and confidence growth.

This platform is designed primarily for middle and high school students, with scalability for adults.

The mission of the app is to prevent academic failure, procrastination spirals, and emotional overwhelm before they escalate.

CORE FEATURES

1. Adaptive Exam Simulation System

- Grade-specific test environments (middle school, high school)
- Subject categories (math, reading, science, writing)
- Timed test interface with countdown
- Optional light classroom background audio

- Adjustable difficulty to prevent discouragement
- After-test breakdown explaining:
    - Grading criteria
    - Where points were lost
    - How to improve

Purpose: Reduce test anxiety through exposure and familiarity.

---

2. Habit Interrupter System

- 5-minute "micro-start" study tasks
- Gentle daily check-in system
- Streak tracking focused on consistency (not punishment)
- Reset option without shame
- Optional reminders (if user grants permission)
- Brief educational explanations about procrastination psychology

Purpose: Provide consistent support even when motivation is low.

---

3. Vent Vault (Emotional Regulation Space)

- Anonymous journaling feature
- Emotion intensity slider
- Grounding exercises (breathing prompts, reframing questions)

- Encouraging but realistic tone
- No toxic positivity

Purpose: Provide a safe space to process stress without feeling like a burden.

---

4. Confidence Builder Layer

- Visual growth charts
- Achievement milestones
- Personalized encouragement based on improvement
- Focus on progress, not perfection

Purpose: Build self-efficacy and long-term resilience.

OPTIONAL EXPANSION FEATURES

- Anonymous username sign-in option
- Email organizer integration for academic prioritization
- Scholarship and tutoring resource section
- Funding/resource page for educational equity

USER EXPERIENCE REQUIREMENTS

- Supportive, calm, and understanding tone

- No harsh red error messages
- No overwhelming dashboards
- Minimal cognitive overload
- Clear navigation with 3–5 main tabs only

The system must feel consistent and reliable.
Even if the user feels lazy, overwhelmed, or behind, the app should feel steady and patient.

AESTHETIC DIRECTION

Design aesthetic should be:

- Soft but structured
- Clean interface with gentle spacing
- Muted earthy tones (sage green, soft beige, warm gray)
- Subtle lavender or dusty blue accent highlights
- Rounded edges (not sharp)
- Soft shadow depth (not harsh contrast)
- Minimalist but emotionally warm

The atmosphere should feel like:

- A quiet study room at sunset
- Calm but focused

- Encouraging without being loud
- Safe but motivating

Typography:

- Modern sans-serif
- Clean and readable
- Slight elegance but not decorative

Animations:

- Smooth transitions
- Slow fade-ins
- Gentle hover effects
- No aggressive pop-ups

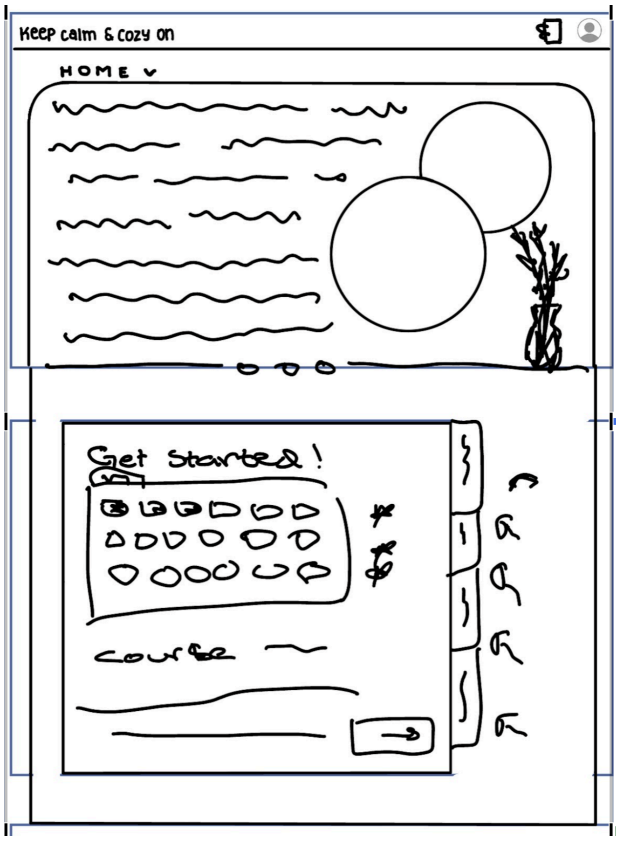
DESIGN PHILOSOPHY

This is not just a productivity app.
This is a preventative resilience system.

The tone should be:
Supportive. Calm. Steady. Non-judgmental. Consistent.

The system should prioritize emotional safety as much as academic improvement.

Image + Structure



Create a cozy student support web app called “Keep Calm & Cozy On.”

The design aesthetic should feel warm, calm, and friendly using soft green and light brown colors, rounded shapes, soft shadows, and hand-drawn style illustrations.

The homepage layout should include:

Top Navigation Bar

- Title: "Keep Calm & Cozy On"
- Notebook icon (opens customizable journaling system)
- Dumpling mascot icon (opens AI chat)
- Plant icon (account settings)

Users should be able to sign up without requiring an email and instead create a simple account with name, age, birthday, gender, and optional email.

Users can also customize their theme colors (choose two colors).

Homepage Layout

Section 1: Welcome Area
Short friendly explanation of the platform.

Include two illustrated elements:

- a cute smiling dumpling mascot
- a stack of books illustration

Section 2: Divider

Aesthetic line divider with small dots.

Section 3: Feature Carousel

Slides introducing:

• Study Courses
• Practice Exams
• Habit Tracker
• Journal Notebook
• Dumpling Chat Support

Each slide includes:

- short explanation
- small illustration

- button to open the feature

Dumpling Guide

After 10 seconds the dumpling mascot appears and introduces the app.

The dumpling:

• welcomes the user
• explains where features are
• can be renamed and customized
• celebrates birthdays
• acts as the AI chat assistant

The tone should feel supportive and friendly.

Study Courses

Subjects include:

Math (organized like Khan Academy topic progression)

Social Studies (organized by major historical topics)

Science (organized by key scientific concepts)

Reading & Writing combined.

Questions should be medium difficulty and educational.

Habit Tracker

Users can:

• add their own habits
• choose custom colors
• track completion on a calendar
• mark habits complete or incomplete

Notebook

Users can:

- journal
- write poetry
- take notes
- record daily logs

Chat

The dumpling AI chat provides:

- emotional encouragement
- study help
- listening support

Include a "Report Problem / Suggest Feature" option.

Account Page

Displays:

- progress stats
- accomplishments
- theme customization
- account settings

Drawn Items to Add

Abstract

Many students struggle with procrastination, test anxiety, and emotional stress while studying. Traditional study tools often focus only on academic performance, ignoring the emotional and behavioral challenges that prevent students from succeeding. This project introduces a supportive digital platform designed to help students build healthier study habits while also improving emotional well-being.

The platform combines several features including a customizable habit tracker, simulated exam environments to reduce test anxiety, a cozy journaling system, and an AI companion that offers encouragement and support. Instead of reacting to academic burnout after it occurs, the system focuses on prevention by helping students gradually build confidence, structure, and self-awareness.

The platform also prioritizes emotional safety by avoiding social chat systems that may lead to cyberbullying, instead offering a private supportive AI assistant. By combining habit science, emotional regulation, and academic practice tools into one supportive environment, the platform aims to create a more balanced and sustainable approach to student success.

FINAL PROMPT - Sums up everything

PROJECT: Cozy Corner

Tagline: "Keep Calm & Cozy On"

Create a cozy, calming web app designed to help students study, build habits, journal creatively, and feel emotionally supported. The environment should feel warm, friendly, and human rather than robotic or corporate.

The design style should be soft, cozy, and illustration-friendly. Avoid generic AI dashboard layouts and avoid emoji-heavy designs. Instead, use simple icons and leave spaces where custom hand-drawn illustrations can be placed later.

COLOR PALETTE
Primary colors: sage green and light brown
Background: warm cream color
Design elements: rounded corners, soft shadows, gentle spacing

The interface should feel like a comfortable digital room, not a productivity dashboard.

TOP NAVIGATION BAR

Left side:
App name: Cozy Corner

Center:
Tagline text: Keep Calm & Cozy On

Right side icons:

Notebook icon → opens the Journal
Dumpling icon → opens the AI chat assistant
Plant icon → opens the user account/profile

These icons should look simple and cute, not corporate.

HOME PAGE STRUCTURE

SECTION 1 — WELCOME AREA

Large rounded container.

Text example:

"Welcome to your cozy corner.
This is a calm space where you can study, build habits, journal your thoughts, and grow at your own pace."

Include space beside the text for an illustration (this will later hold a custom dumpling drawing).

After the user spends about 8–10 seconds on the page, a small dumpling assistant should appear and briefly introduce the platform.

Example message:

"Hi! I'm your dumpling buddy.
I'll help guide you around Cozy Corner.
You can rename me anytime!"

The dumpling assistant should guide the user toward the journal, study tools, and habits system.

SECTION 2 — MOTTO ILLUSTRATIONS

Below the welcome section include two circular illustration areas.

Circle 1: dumpling mascot illustration
Circle 2: stack of books illustration

These represent comfort and studying.

Keep them simple placeholders so custom drawings can replace them later.

SECTION 3 — DIVIDER

A soft horizontal divider with decorative dots to visually separate sections.

Example style:
— • — • — • —

SECTION 4 — FEATURE CAROUSEL

Create a sliding carousel showing the main features of the platform.

Each slide includes:
• small illustration placeholder
• short description
• button to open that feature

Slides should include:

Study Courses
Practice Exams
Habit Tracker
Cozy Journal
Dumpling Chat

The tone of descriptions should be short, supportive, and friendly.

STUDY SYSTEM

Do NOT organize courses by “middle school” or “high school”.

Instead organize by topic, similar to Khan Academy.

Subjects:

Math
History / Social Studies
Science
Reading & Writing

Math example topics:
Fractions
Algebra
Geometry
Statistics

History example topics:
Declaration of Independence
War of 1812
Civil Rights Movement
World History topics

Science example topics:
Cells
Energy
Physics basics
Climate and Earth science

Reading & Writing topics:
Reading comprehension
Essay writing
Grammar and editing
Literary analysis

Each course should include:
practice questions
explanations
progress tracking

Practice exams should simulate real exam environments with timers and review pages.

Questions should not be extremely easy; they should match real school difficulty.

HABIT TRACKER

Remove any forced habit system.

Users must be able to:

Create their own habits
Choose colors for habits
Rename habits
Track daily completion

Include a small calendar view where habits can be marked as complete or incomplete.

Include streak tracking to show consistency.

The dumpling assistant should occasionally encourage the user when habits are completed.

JOURNAL (IMPORTANT)

This must NOT look like a basic notes app.

Instead create a creative digital journal environment.

Features:

Drag-and-drop stickers
Add images
Move text boxes around
Add decorative elements
Add small drawings or illustrations

Users should be able to design pages visually like a scrapbook.

Supported journal entry types:

Text writing
Voice recordings
Music recordings
Mood stickers
Pictures

The goal is to feel like decorating a journal page rather than typing notes.

Optional feature:
AI reflection summary that gently summarizes the user's day if they want it.

Example:

"Today you studied for 20 minutes and completed two habits. Great progress."

The journal should feel personal, warm, and expressive.

DUMPLING AI ASSISTANT

The dumpling assistant is the emotional guide of the platform.

Functions:

Encouragement
Study help
Listening support
Friendly conversation

The dumpling should greet users on special days like birthdays.

Users can rename and customize the dumpling.

The chat page should also include a Report Problem / Suggest Feature section where users can send feedback.

Important:
Do NOT include user-to-user chat to avoid cyberbullying.

ACCOUNT SYSTEM

Users should be able to sign up without using a real email.

They can create an account with:

Name
Birthday
Age
Gender (optional)

Users can customize theme colors by selecting two colors for their interface.

Default theme remains sage green and light brown.

Profile page should show:

Achievements
Habit streaks
Study progress
Account settings

OVERALL DESIGN GOAL

The platform should feel like a cozy supportive space rather than a productivity machine.

Focus on:

Calm visuals
Encouraging language
Friendly mascot guidance
Creative journaling

The app should support both academic improvement and emotional well-being.

Leave placeholder areas for future custom hand-drawn illustrations that will replace icons and decorations.
